The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 2, and 5-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nurok (Journal of Planar Chromatography, Vol. 11, July/August 1998, pages 244-246) in view of Perry (U.S. Patent No. 3,864,250). At best, the claims differ from Nurok (Journal of Planar Chromatography, Vol. 11, July/August 1998) in reciting use of pressure. Nurok (Journal of Planar Chromatography, Vol. 11, July/August 1998, pages 244-246) is concerned with the evaporation of mobile phase. Perry (U.S. Patent No. 3,864,250) (column 1, lines 45-51) discloses that heat controls the movement of solvent through the bed and pressure may be used to control evaporation. It would have been obvious to use a temperature controlled pressure chamber in Nurok (Journal of Planar Chromatography, Vol. 11, July/August 1998, pages 244-246) because Perry (U.S. Patent No. 3,864,250) (column 1, lines 45-51) discloses that heat controls the movement of solvent through the bed and pressure may be used to control evaporation.

Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Nurok (Journal of Planar Chromatography, Vol. 11, July/August 1998, pages 244-246) in view of Perry (U.S. Patent No. 3,864,250) as applied to claims 1, 2, and 5-12 above, and further in view of Stillian (U.S. Patent No. 5,248,426). At best, the claim differs from Nurok (Journal of Planar Chromatography, Vol. 11, July/August 1998, pages 244-246) in view of Perry (U.S. Patent No. 3,864,250) in reciting use of foil. Stillian (U.S. Patent

Art Unit: 1723

No. 5,248,426) (column 12, lines 38-41) discloses platinum foil electrodes prevent excessive resistive heating. It would have been obvious to use platinum foil electrodes in Nurok (Journal of Planar Chromatography, Vol. 11, July/August 1998, pages 244-246) in view of Perry (U.S. Patent No. 3,864,250) because Stillian (U.S. Patent No. 5,248,426) (column 12, lines 38-41) discloses platinum foil electrodes prevent excessive resistive heating.

Claims 11 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nurok (Journal of Planar Chromatography, Vol. 11, July/August 1998, pages 244-246) in view of Perry (U.S. Patent No. 3,864,250) as applied to claims 1, 2, and 5-12 above, and further in view of Tompa (U.S. Patent No. 4,671,870). At best, the claims differ from Nurok (Journal of Planar Chromatography, Vol. 11, July/August 1998, pages 244-246) in view of Perry (U.S. Patent No. 3,864,250) in reciting use of a temperature control device. Tompa (U.S. Patent No. 4,671,870) (column 5, lines 46-53) discloses that a temperature control device allows for temperature in a pressurized thin layer chromatography device. It would have been obvious to use a temperature control device in Nurok (Journal of Planar Chromatography, Vol. 11, July/August 1998, pages 244-246) in view of Perry (U.S. Patent No. 3,864,250) because Tompa (U.S. Patent No. 4,671,870) (column 5, lines 46-53) discloses that a temperature control device allows for temperature in a pressurized thin layer chromatography device.

The election of species requirement has been reconsidered, deemed proper, and made final.
